

Drivers

To enable a DTMS driver for Mobile:

- In Driver Maintenance, assign his 'Section' to the value you specified in system parameter tr-bl / AlertDriver → *DriverSectionsEnabled*

The screenshot shows the 'Driver Details' form in a web application. The form includes the following fields and options:

- Driver Code: 2019
- Corporation Name: [Empty]
- Name: JIMMY JOH
- Change Audit Cards
- Header
- Emerg Contact
- Rates
- History
- Schedule
- Due Dates
- Notes
- Accidents
- Emergency Contact: [Empty]
- EC Address 1: [Empty]
- EC Address 2: [Empty]
- EC Province: [Empty]
- EC City: [Empty]
- EC Postal: [Empty]
- EC Phone: [Empty]
- EC Relation: [Empty]
- Route Code: [Empty]
- Section: M
- Opstype: 0

- In DTMS Security, set up a user record for the driver.
- *User Login Name* should be identical to the driver code
- *Password* should be set.
- *Enabled* flag should not be set (as the mobile back-end will check this flag before allowing the driver to log in)

The screenshot displays the 'Security Control' application window. On the left is a tree view with categories: 1. Security maintenance (sub-categories: Actions, Data ranges, Fields, Login companies, Security groups, User categories), 2. Security allocation, 3. Security enquiry, and 4. Security processing. The main area is titled 'User Maintenance - 006' and contains a table of users. The user '2019' is selected and highlighted in blue. Below the table is a 'Details' tab with various user configuration fields.

User login name	User category code	Profile use	Based on profile	Development user	Disable	External userid	User full name
